Light Standards  
and Break Away Bases**

## CIM LIGHT STANDARDS, TRAFFIC POLES AND BREAK AWAY BASES

We have been manufacturing poles for many years and have been supplying SaskPower with streetlight poles since 1985. We now also manufacture the CIM Break Away Base.

The use of Break Away Bases reduces injury to public and damage to property. When a Break Away Base mounted pole is struck by a vehicle the base fractures and allows the pole to move with the vehicle. This reduces the impact to the vehicle and lessens the impact damage and injury to the occupants. Although it will fracture upon impact, it maintains its strength to support a pole under windy conditions.

### STANDARD EQUIPMENT

- Available in Several Standard Sizes
- Can Be Manufactured to Meet Your Required Specifications
- Galvanized or Painted in Your Color of Choice
- Ordered Individually or By the Truckload and Shipped to Site

### POLE OPTIONS

- Octagonal Tapered Light Poles with Straight or Davit Top Sections
